

PORTFOLIO BRIEF

Activity 12 · Building Your Portfolio Blog by Prompting an AI Assistant

Name	Kanishk Sinha
Semester	3rd Semester
Branch	B.Tech Computer Science and Engineering
University	REVA University

1. About Me

I am a 3rd-semester Computer Science and Engineering student at REVA University. I am currently building my foundations in programming, problem solving, databases, Git/GitHub, and web development through coursework and hands-on projects. I learn by creating small projects, practicing coding problems, and improving how I document and present my work. My current focus is on becoming more confident with programming and developing practical technical skills.

2. What I Have Built and Practiced

Hello World C Repository

Created a first public GitHub repository containing a C Hello World program and documented the basic Git/GitHub workflow.

Git & GitHub Practice

Practiced repository creation, commits, branches, collaboration and publishing through the Portfolio Building coursework.

LeetCode Solutions

Built a dedicated public repository for coding practice and problem-solving solutions, developing consistency and algorithmic thinking.

2D Graphics Editor

Created a console-based 2D graphics editor in C that draws shapes using character-based output. The repository includes source code, a README and a prompt document.

HackerRank 3rd Sem Portfolio

Created a C++ problem-solving portfolio containing five mandatory HackerRank problems, accepted-submission evidence, complexity analysis and a 3-star HackerRank achievement.

3. Current Technical Skills

Programming	C, C++
Problem Solving	LeetCode, HackerRank, algorithmic practice
Web	HTML, CSS, JavaScript
Data / Databases	SQL and DBMS fundamentals
Tools	Git, GitHub, VS Code

PORTFOLIO DIRECTION

Presenting real work clearly, while continuing to build technical depth

4. Selected GitHub Portfolio

Repository	What it demonstrates
portfolio	Personal website built with HTML, CSS and JavaScript; deployed with GitHub Pages.
leetcode-solutions	Ongoing coding and problem-solving practice in C.
HackerRank-3rdSem-Portfolio	Structured competitive-programming practice with complexity analysis and submission evidence.
2d-graphics-editor	C programming, console output, project organization and documentation.
News	Web development practice using HTML, CSS and JavaScript.
huggingface-model-analysis	AFE assignment documenting and comparing information about DeepSeek-R1.

5. Learning and Career Goal

My immediate goal is to become more confident and consistent in programming by strengthening my C/C++ fundamentals, Data Structures and Algorithms, SQL, and practical Git/GitHub workflows. I want to keep building small but complete projects, improve my problem-solving practice, and gradually move towards internship-level software development work. Rather than trying to learn everything at once, I want to build a strong foundation and use real projects to show measurable progress.

6. Portfolio Presentation Goal

The portfolio page created from this brief should present my work in a clear, student-level and professional way. It should help a visitor quickly understand who I am, what I have built, what technologies I am learning, and where they can view my work. The content should use my actual GitHub repositories and avoid generic or invented project claims.

Prepared for Portfolio Building Activity 12. The activity brief requires a 1–2 page source document covering identity, bio, prior work, skills and a learning/career goal. The Activity 12 handout describes earlier artifacts as Hello World, collaboration work and a LeetCode repository; the separate Activity 4 handout describes GitHub branches, pull requests and Pages. This brief therefore avoids assigning unsupported activity numbers to individual projects.
